Profile

As a Full Stack Developer with approx. 2.5 years of experience in MongoDB, MySQL, Express.js, React, Nest.js, and Node.js, I've delivered scalable web applications and APIs, improving system performance by 30%. My proactive approach, commitment to innovation, and continuous learning ensure I stay ahead in backend technologies, offering creative problem-solving and exceptional user experiences.

Professional Experience

Intelytics, Software Engineer

07/2024 – Present

Projects:

Intelypro - Automating Marketing & Retail Services

- Proficiently managed client setups, calendar configurations, and POP/POS/Geo Fence associations in a comprehensive backend project.
- Demonstrated adeptness in user management, including setups, bulk creations, role assignments, and group associations.
- Optimized backend workflows, achieving 30% improvement in overall system performance.

Shell Petroleum:

- Designed and implemented user registration and hierarchy management system for different roles.
- Developed modules for mechanic registration, profile approval workflows, and status management.
- Proficiently managed the linking and unlinking of users with their parent users in backend.
- Proficiently add the features of importing products and creating QR code for each product in backend.
- Implemented QR code scanning mechanism for mechanics to earn loyalty points, and managed cumulative scoring logic.
- Designed and maintained a digital wallet for mechanics to track earned points and transactions.
- Add the feature of gift redeem approval or rejection.
- Developed dynamic APIs to power dashboards, providing real-time insights and data visualization based on the hierarchy and role of each user

Gloria:

- Built a robust authentication system with role-based access control to ensure secure and permission-driven access across admins, business owners, staff, and customers.
- Engineered the backend to support multi-level business structures, ensuring data consistency and scalability.
- Maintain service creation by admins and linkage of services with respective brands and branches.
- Built booking APIs that allowed customers to browse branches, view services, and schedule appointments with real time availability checks.
- Designed a scheduling system to manage branch employees' calendars, track availability, and handle assigned bookings.

- Developed cron jobs to generate consolidated invoices for each branch, improving billing accuracy and reducing manual effort.

Shayan Solutions, *Associate Software Engineer*

08/2023 – 06/2024

Projects:

FitX

- Develop node.js based backend for Flutter application to store auto generated exercises along with custom generated using ChatGPT.
- Implemented functionality to upload videos to Cloudinary, ensuring efficient and secure storage.

Employee Management System

- Designed and implemented new features for the improving user experience and operational efficiency.
- Identified, diagnosed, and resolved software defects in the system results in enhancement of system reliability

Skills

Javascript • NodeJs • ExpressJs • NestJs • MySql • Mongodb • Snowflake • React Native •
ReactJs • Moyasar • Git • Typescript • Team Development

Education

UET Lahore, *BSCS*

2019 – 2023 | Lahore, Pakistan

Certificates

ITEC 2023 - IT Exhibition and Competition

Received a recognition certificate at UET Lahore for presenting an innovative project in computer science.
